RE: Sunnynook Transmission Project – Project Update

In June 2023 and November 2023, ATCO Electric Ltd. (ATCO) sent you information about the proposed Sunnynook Transmission Project (the Project). The Project includes the construction of approximately five (5) kilometres of single-circuit 240 kilovolt (kV) transmission line (to be called 9LA24) which will connect the customer's substation to the existing 240 kV transmission line 9L24 in a T-tap configuration.

The Project also requires modifications to existing transmission line 9L24 to accommodate the T-tap connection of proposed transmission line 9LA24. This letter provides you with an update on Project status and timelines.

Project Update

On June 21, 2024, ATCO submitted a Facility Application (Proceeding No. 29101) for the Project to the Alberta Utilities Commission (AUC). On August 28, 2024 the AUC approved ATCO's Facility Application and issued ATCO permits to construct, and licences to operate the Project.

Construction Schedule

Construction is scheduled to commence in November 2026. During construction, there will be periods of increased traffic and construction noise within localized areas. ATCO will strive to reduce disruption and inconvenience during construction where reasonably possible.

The Project is targeted to be in-service by May 1, 2027. Please note that timing and details may be adjusted as plans are finalized.

Please contact us should you have any questions or comments regarding the Project.

Sincerely,

**Rechelle Halabut**
